**Weekend Web Development Bootcamp (HTML, CSS, JavaScript, C#, DotNet, SQL, Typescript, API, Angular, Node)**

SELF TAUGHT  
**Treehouse/Udemy/YouTube/W3Schools/MDN/WesBos/...**

## EXPERIENCE

---

### FRONT-END WEB DEVELOPER - 5/2017-Present

- Java and HTML experience in college
- Nashville Software School: Learned how to integrate CSS and JavaScript with HTML
- Developed the first version of SteveAOlsen.com which included HTML, CSS with animations, JavaScript with jQuery animations, a PHP contact page and some multimedia.
- JavaScript project: Birthday/Age Calculator. Built a project which would prompt the user for their birth-year, birth-month and birth-day and then used JavaScript to do the math and print the user's exact age.
- JavaScript project: To Do List. Built a to do list using vanilla JavaScript which uses the push and shift methods to add items to an array and posts them to the screen.
- Wes Bos 30 day challenge. I did a few of his projects and used what I learned in the next two projects.
- JavaScript project: The Office Soundboard. I made a soundboard for the characters of the office based off of Wes Bos' drum kit project. I wanted mine to work on a touchscreen however, so I added "onclick" functionality so the user could either hit a button or click on the button to get the same result.
- JavaScript project: JS Clock. I created a clock with CSS and used JavaScript to animate it to the correct time.
- JavaScript project: Presidents. I developed this using an array of JS objects and when the user enters a number the program will show the corresponding president with that president's term info.
- Logols Bootcamp Detroit: Learned Full Stack including C#, DotNet, Angular, TypeScript, Web API, HTML, CSS, JavaScript, SQL, Node.
- Redesigned SteveAOlsen.com with some additional technologies.
- Treehouse online learning including HTML, CSS and JavaScript courses.
- C# project: Fitness Frog. Based off of a Treehouse exercise I developed a console program in C# that would prompt the user for workout data and keep a tally of workout time as well as offer encouragement based on how long the user worked out.
- Udemy: Data Science. Learned how to write SQL and use MySQL to create databases. Learned Tableau for presentation of the data.
- Udemy: React. Learned the React JS library and am currently working to build my JavaScript and React skills.

### RETENTION MANAGER @ ADVANCED DISPOSAL, Detroit, MI - 1/2014-PRESENT

- Rated top 5 in company sales person in February 2018.
- Reputation for putting out fires and damage control. Go-to person for management. Problem solver.
- Trained three Retention Managers as new hires.
- Acted as an in-house consultant and helped management design the entire retention program for the Detroit market area in 2014, which is still in place today.
- I moved to Nashville and held jobs with Sysco Foods and USB Nashville before moving home and being re-hired by Advanced Disposal.
- Involved in training the customer service department as well as cross department improvement with operations and the customer service teams.
